Professional Summary

Cybersecurity student and U.S. Marine Corps Veteran with hands-on experience securing enterprise networks, managing infrastructure, and supporting communications. Strong background in network troubleshooting, system hardening and secure configurations of routers, switches, and servers. Currently expanding expertise in cybersecurity and AI-driven threat analysis at the University at Albany.

Technical Skills

Networking: TCP/IP, Subnetting, Routing & Switching, VLANs, Cisco Networking, Network Troubleshooting, VoIP.

Systems & Infrastructure: VMware vSphere (ESXi, vCenter), Windows Server, Linux, Active Directory

Tools & Technologies: Cisco Call Manager, Routers & Switches, Wireshark, Python, Kali Linux, Cisco Packet Tracer, Docker, WSL2, LLM Fine-Tuning, Generative AI, Metasploit, OPNsense (VPN + Firewall), Nmap, Neural Networks.

Work Experience

United States Marine Corps

Okinawa Japan, Darwin Australia

Data Systems Administrator

January 2019-July 2022

- Accounted for over \$200,000 worth of computers, switches, routers, and telephony devices.
- Managed and secured enterprise-level IT systems, ensuring seamless operations for mission-critical communications.
- Supported Linux, Microsoft, and Windows-based environments with a focus on network integrity, and data security
- Architected virtual machines within VMware solutions such as ESXi and VSphere.
- Configured network devices such as layer 2 and 3 routers and switches.
- Implemented file sharing services, print services, and active directory services within servers
- Configured and maintained VOIP telephony services via Cisco Call Manager Express

Undergraduate Researcher (AI & Cybersecurity)

Albany, NY

University at Albany, SUNY

August 2025 – May 2026

- Developed and evaluated LLM-based malware detection models using the EMBER dataset, comparing LoRA and full fine-tuning approaches
- Built retrieval-augmented generation (RAG) pipelines for secure, query-based cybersecurity knowledge systems

Projects & Research

IEEE Big Data Conference Publication

August 2025

"Accuracy and Efficiency Trade-Offs in LLM-Based Malware Detection and Explanation: A Comparative Study of Parameter Tuning vs. Full Fine-Tuning"

- Evaluated trade-offs between performance, interpretability, and efficiency
- Integrated explainability methods into cybersecurity workflows
- Compared LoRA vs full fine-tuning approaches on EMBER dataset

Education

SUNY Albany

Albany, NY

Bachelor of Science in Cyber Security.

January 2023- May 2026

Awards

Meritorious Mast (USMC)

December 2018

For stellar performance during training in Data Systems Administration placing him first out of 30 Marines, demonstrating above and beyond academic and technical experience

Meritorious Mast (USMC)

February 2022

Noteworthy performance with Marine Wing Communications Squadron 18, supporting VMFA-112 communications through the installation and maintenance of network and VoIP systems while demonstrating strong initiative

Exceptional Research Award (UAlbany)

May 2026

Received from University at Albany for outstanding academic research and contributions.
